

High-Copper CSM FM Gold 250 Microphone Cables Deliver High-Resolution, Long-Run Performance

June 25, 2019, Dachau, Germany: Premier cable manufacturer Cordial GmbH has begun shipping the newest addition to their acclaimed high-copper series cables, the **CSM FM Gold 250** microphone cable, an optimized pairing of exceptional sonic performance and road-tested reliability.

Newly-fashioned from Cordial's German-engineered and -manufactured CMK 250 cable, the CSM FM Gold 250 series is designed to deliver the most accurate, full-bandwidth signal over the greatest possible distance, making it ideal for both pro studio and for live applications.

"Our high-copper cables all excel at delivering pure, uncompromised sound, and the CSM 250 FM Gold is no different. We're able to extend the full-bandwidth performance of the cable to well over 100 feet before signal attenuation is even measurable," explained Cordial project manager Georg Withof. "And we've engineered the cable to be both supple and extremely durable, so live sound engineers can work with it easily and use it confidently."

In the studio, the sonic improvement offered by CSM FM 250 Gold cables over standard microphone cables is readily apparent, even when long runs aren't involved. Says Michael Dumas, co-owner (with *The Doors* Robbie Krieger) of Horse Latitudes studio in Los Angeles, "The cables' clarity is simply stunning, and the cumulative effect of that clarity in a large session makes a dramatic difference in the final recording." CSM FM 250 Gold cables are also prominently featured in Grammy award-winning engineer/producer Sylvia Massy's new Dolby Atmos® facility in Ashland, Oregon, which is being wired exclusively with Cordial cable. Sylvia's take on Cordial: "These cables are extraordinary... every detail is perfect!"

The CSM FM Gold's outstanding performance can be attributed to the use of dual double-shielded 0.5mm² (AWG 21) inner copper cores—more than twice the copper content of standard microphone cables and fashioned from Cordial's own reserves of 99.99% pure virgin (non-recycled) oxygen-free copper. The twisted core pair is then wrapped in both a noise-eliminating core sleeve and a braided copper sleeve, and encased in a highly-durable PVC jacket. As with all Cordial cables, the CSM Gold series is outfitted with hand-soldered Neutrik connectors; the "Gold" in the product's name references the Neutrik connector's oxidation-resistant gold contacts. A convenient built-in Velcro tie and clear heat-shrink label sleeves top off the package.

CSM FM 250 Gold microphone cables are available in pre-made lengths from 2.5m – 10m (8ft. – 33ft.) as well as in bulkware for installation and custom configurations. Prices start at \$34.99 (MAP); contact sales@mvproaudio.com for bulkware pricing and additional information.
